SET 12 – WEBSITE TRAFFIC ANALYSIS

Aim

To analyze website traffic using a line chart, bar chart, and table in R.

Algorithm

1. Create the website traffic dataset.
2. Plot daily page views using a line chart.
3. Create a bar chart for click-through rates.
4. Display the website traffic data in a table.
5. Add appropriate labels and titles.

R Program

```
library(ggplot2)
```

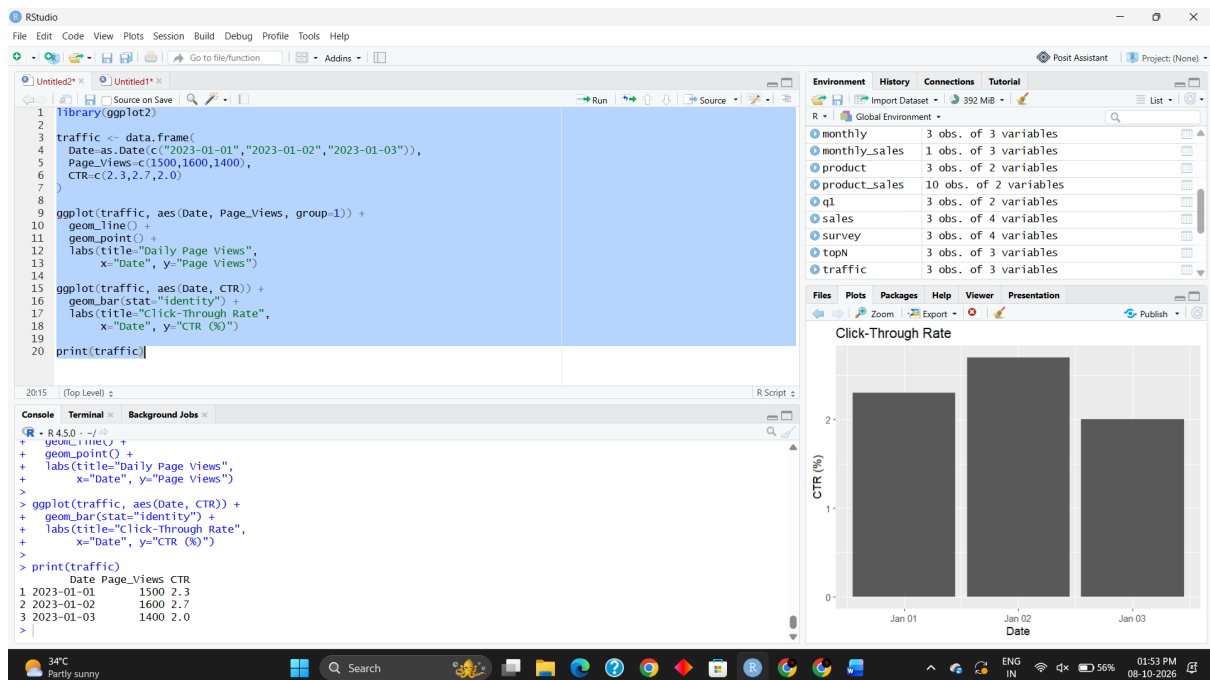

```
traffic <- data.frame(  
  Date=as.Date(c("2023-01-01","2023-01-02","2023-01-03")),  
  Page_Views=c(1500,1600,1400),  
  CTR=c(2.3,2.7,2.0)  
)
```

```
ggplot(traffic, aes(Date, Page_Views, group=1)) +  
  geom_line() +  
  geom_point() +  
  labs(title="Daily Page Views",  
       x="Date", y="Page Views")
```

```
ggplot(traffic, aes(Date, CTR)) +  
  geom_bar(stat="identity") +  
  labs(title="Click-Through Rate",  
       x="Date", y="CTR (%)")
```

```
print(traffic)
```

OUTPUT:

Result

The line chart successfully shows the trend in daily page views. The bar chart displays the click-through rate for each day, and the table presents the complete website traffic data.
