SET 11 – PRODUCT CATEGORY ANALYSIS

Aim

To analyze sales conversion across different product categories using a pie chart, funnel chart, and table in R.

Algorithm

1. Create the product category and sales dataset.
2. Create a pie chart to show sales distribution.
3. Create a funnel-style chart to compare category sales.
4. Display the sales data in a table.
5. Add suitable labels and titles.

R Program

```
library(ggplot2)
```

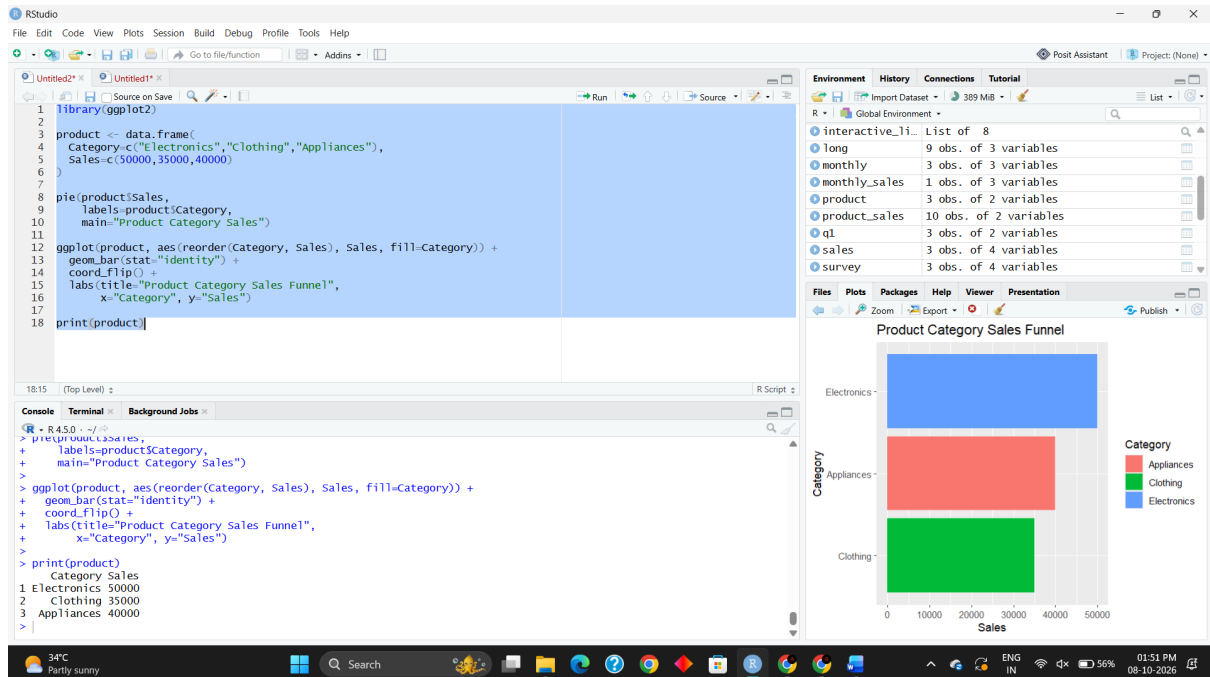

```
product <- data.frame(  
  Category=c("Electronics","Clothing","Appliances"),  
  Sales=c(50000,35000,40000)  
)
```

```
pie(product$Sales,  
  labels=product$Category,  
  main="Product Category Sales")
```

```
ggplot(product, aes(reorder(Category, Sales), Sales, fill=Category)) +  
  geom_bar(stat="identity") +  
  coord_flip() +  
  labs(title="Product Category Sales Funnel",  
    x="Category", y="Sales")
```

```
print(product)
```

OUTPUT:

Result

The pie chart successfully shows the sales distribution among product categories. The funnel-style bar chart compares the sales of Electronics, Clothing, and Appliances, and the table displays the sales data.
